PRODUCT FEATURE:

## THE RIGHT TIME FOR THE RIGHT PEOPLE

By Scott Harris, Freelance Writer

The most valuable commodity in a modern police department might be one a leader doesn't often consider, at least not in the same way he or she might consider funding or tactical equipment like body armor. Even so, there may be no more important resource than time.

It appears that staffing shortages at U.S. law enforcement agencies may be moving from bad to worse. Due to a number of factors, applications are down as much as 90 percent in some departments, exacerbating an existing scarcity of human resources in the public safety sector.[1]

This could spur a renewed focus on personnel management to ensure that as much time as possible can be devoted to meaningful police work, rather than the logistics associated with coordinating and scheduling the various activities and functions that accompany the job.

Several companies offer services and products that can cut through red tape, freeing professionals up to do the work they were trained and hired to do.

### Easier Scheduling

Court dates are an inevitable part of life in law enforcement. But in many instances, valuable time can be lost in a cumbersome scheduling process. My Court Calendar, a new software program, works to address that issue.

"Normally a subpoena is submitted by an officer or deputy sheriff. They pull up an officer's work schedule," said Thomas Santarlas, president of My Court Calendar, which is headquartered in Florida. "Once they meet those hurdles, they have to eventually get it to a squad sergeant and hand deliver it to the officer or put it in his or her mailbox, who has to sign having received this."[2]

That is the traditional way. My Court Calendar can shave hours off that approach. "With our system, we've automated it," Santarlas said. "They can look at the work schedule and see when people are on duty, off duty, out of the office. They set a court date. It's informed, instead of picking a court date in the dark."[3]

The software can also save money. With a base cost to agencies of $40 for up to 10 users, plus $4 for each additional user, the service can quickly pay for itself, especially in the case of agencies that rely on private process servers that can charge anywhere from $40 to $80 per subpoena served.

Court appearances are far from the only activity that officers perform in addition to their policing duties. Training and volunteering, for example, also appear frequently on a typical officer's calendar. Public Safety Software Group in California has created three products designed to help agencies better track these kinds of activities.

The Volunteer Integrated Management System (VIMS), released in 2009, is currently in use by close to 100 public safety agencies as a way of housing volunteer information in a central location and coordinating volunteer activities and schedules.

The Off Duty Integrated Scheduling System (ODISS) simplifies the process of announcing, scheduling, and tracking paid special assignments and events. Cost of the service starts as low as $39 per month.

The newest of the group's services, unveiled this fall, is the Training Integrated Management System (TIMS), which provides a fast and easy way of scheduling training sessions, notifying pertinent staff of opportunities, and monitoring individual training activities.

"It smooths it all out," said Art Fernister, owner and founder of Public Safety Software Group. "People are not sending emails all day… There are so many other things you can do with that time… Think of all the services or tasks that could be done."[4]

### Evaluating Performance Evaluations

At one point during his career, Don Cirillo was writing as many as 20 performance evaluations each year. While he enjoyed many of the tasks he performed as a manager, the evaluations became a dreaded annual grind.

"They're not easy," Cirillo said. "You're pitting one officer against another. It's a hard job to do. I was having a hard time thinking of what I wanted to say."[5]

> *Better information from the community, delivered regularly and reliably, can help officers target their efforts more efficiently.*

Now as the head of Law Enforcement Evaluations Online, a Wisconsin-based company, Cirillo's using his experience—and some of those less-than-stellar memories—to make evaluations easier for the supervisors. His company produces two primary tools: a digital manual containing a slew of common phrases used in law enforcement evaluations and standardized evaluation forms that reduce writing and make the process more efficient and consistent.

Combined or separate, Cirillo said the tools can help supervisors complete evaluations in one-third the time it takes with traditional or unassisted methods. "You see the actual phrases and you just grab one and put it in the form, instead of thinking about what to say," Cirillo said. "It just makes your job easier from the standpoint of what you're going to say. It gives you ideas."[6]

### Predictive Policing, Predicting Personnel

Smoother, faster workflows can make a real difference in the office. They can also make a difference in the field.

Better information from the community, delivered regularly and reliably, can help officers target their efforts more efficiently. Exploring the data around work patterns and caseloads can improve decision making about where officers and investigators spend their valuable hours.

Rick Shaw is the founder and CEO of Awareity, a Lincoln, Nebraska, company that created TIPS, short for Threat Assessment, Incident Management, and Prevention Services. Through TIPS, community

CIO Review 20 MOST PROMISING PUBLIC SECTOR SOLUTION PROVIDERS 2017

### Public Safety Software Group

### Disruptive Innovation for Public Safety Technology

Companies like Uber and Airbnb, today, have opened up newer boulevards of disruptive innovation and have become well known brands of their respective industries. Their unsettling ideation changed the course of traditional markets and offered inventive services at a better price-point that was not available earlier. Bringing similar disruption to the public safety sector, the Public Safety Software Group (PSSG) puts forth a suite of cloud-based software products designed for public safety agencies to offer highly affordable software applications that fulfill specific requisites without having to make bigger investments in enterprise-wide offerings to get just a few needed applications.

Serving in the law enforcement community and fire service for over 20 years in a volunteer/reserve role, Art Fernister, Founder, PSSG, states, "I saw firsthand the need for niche software products that not only help free up manpower but are also affordable." While technology can do great things, police and fire chiefs mention "unless the innovation is affordable, it doesn't do anyone any real good.' "We design and develop highly affordable, user-friendly products that any agency can afford and put to use, freeing up staff by automating mundane and repetitive tasks." Fernister adds, "I believe our 96 percent renewal rate says it all; the software just works and does what it's supposed to, so our clients are happy and continue using it."

The majority of police and sheriff's departments are small to medium-sized agencies. As of 2016, there were around 12,116 police departments across the nation with 90 percent of them with less than 100 police officers, 84 percent with less than 50 police officers, and 71 percent with 25 or fewer officers. "Our products are very affordable thus making them very well suited to small and medium sized agencies as well as larger agencies that are looking for specific solutions that we offer," says Fernister.

> “I saw first-hand the need for niche software products to save time, be efficient while also being highly affordable”

PSSG's suite of cloud-based SaaS products includes ODISS, TIMS, and VIMS. ODISS, the Off-Duty Integrated Scheduling System helps agencies schedule their full-time sworn officers for special events as well as paid-off duty assignments outside their normally scheduled shifts such as sports and entertainment venues. TIMS, the Training Integrated Management System is used to announce and schedule training classes, re-certifications, etc., tracking training required for agency, state and federal compliance, and includes a career path navigator to help officers better understand what is needed to advance within their department.

Finally, comes VIMS–Volunteer Integrated Management System, the company's first product developed in-house in 2009. Almost half of all public safety agencies utilize some form of volunteers, all of which have unique requirements that need to be tracked, reported, and stored just like full-time paid personnel. Fernister remarks, "As a police volunteer myself, I saw how numerous redundant paperwork tasks were being performed along with other tasks that were not being followed up on–such as years of service awards and training requirement analysis–because there was no automated way to track them and hence invoked the idea to create VIMS."

Art Fernister

In explaining the value brought to their client agencies, Fernister explains how their suite of products eliminates the complexities in maintaining separate calendar and email systems along with various multiple spreadsheets to track hours and events and simplify the process. Public safety agencies utilize their suite of products to save time and better utilize staff, Fernister says. "Our clients are our number one asset. By taking great care of them, they in turn help us grow with new product ideas that help the industry in general, it's truly a win-win for all of us," says Fernister.CR
